Useful facts

– In which Siedle Steel mounting options is Siedle Touch available?

> In surface-mounted (AP), flush-mounted (UP) and free-standing versions.

– What considerations are necessary for the installation solution?

> The installation depth for the flush-mounted housing has to be taken into account. Additional components such as door loudspeaker module, camera, etc. have to be ordered and integrated separately. The assembly has to be carried out in the area protected from the weather and behind the existing front panel.

– Can third-party products also be used in the installation solution?

> No, they cannot. Only Siedle products can be installed – there is no compatibility with other suppliers.

– Which temperature range is the panel designed for?

> The panel is designed for temperatures ranging from -20 °C to +55 °C.

– How secure is the panel in relation to weather-resistance and vandalism?

> The panel has the protection code IP 65. The operating surface is protected with a tough glass (4 mm, IK08 protection code), which protects against vandalism.

– What has to be considered when positioning the panel?

> Siedle Touch is suitable for installation in outdoor areas protected from the rain. Direct sunlight on the display surface must be avoided. Even in the case of a rear-mounted solution, the display must be accessible for purposes of servicing.
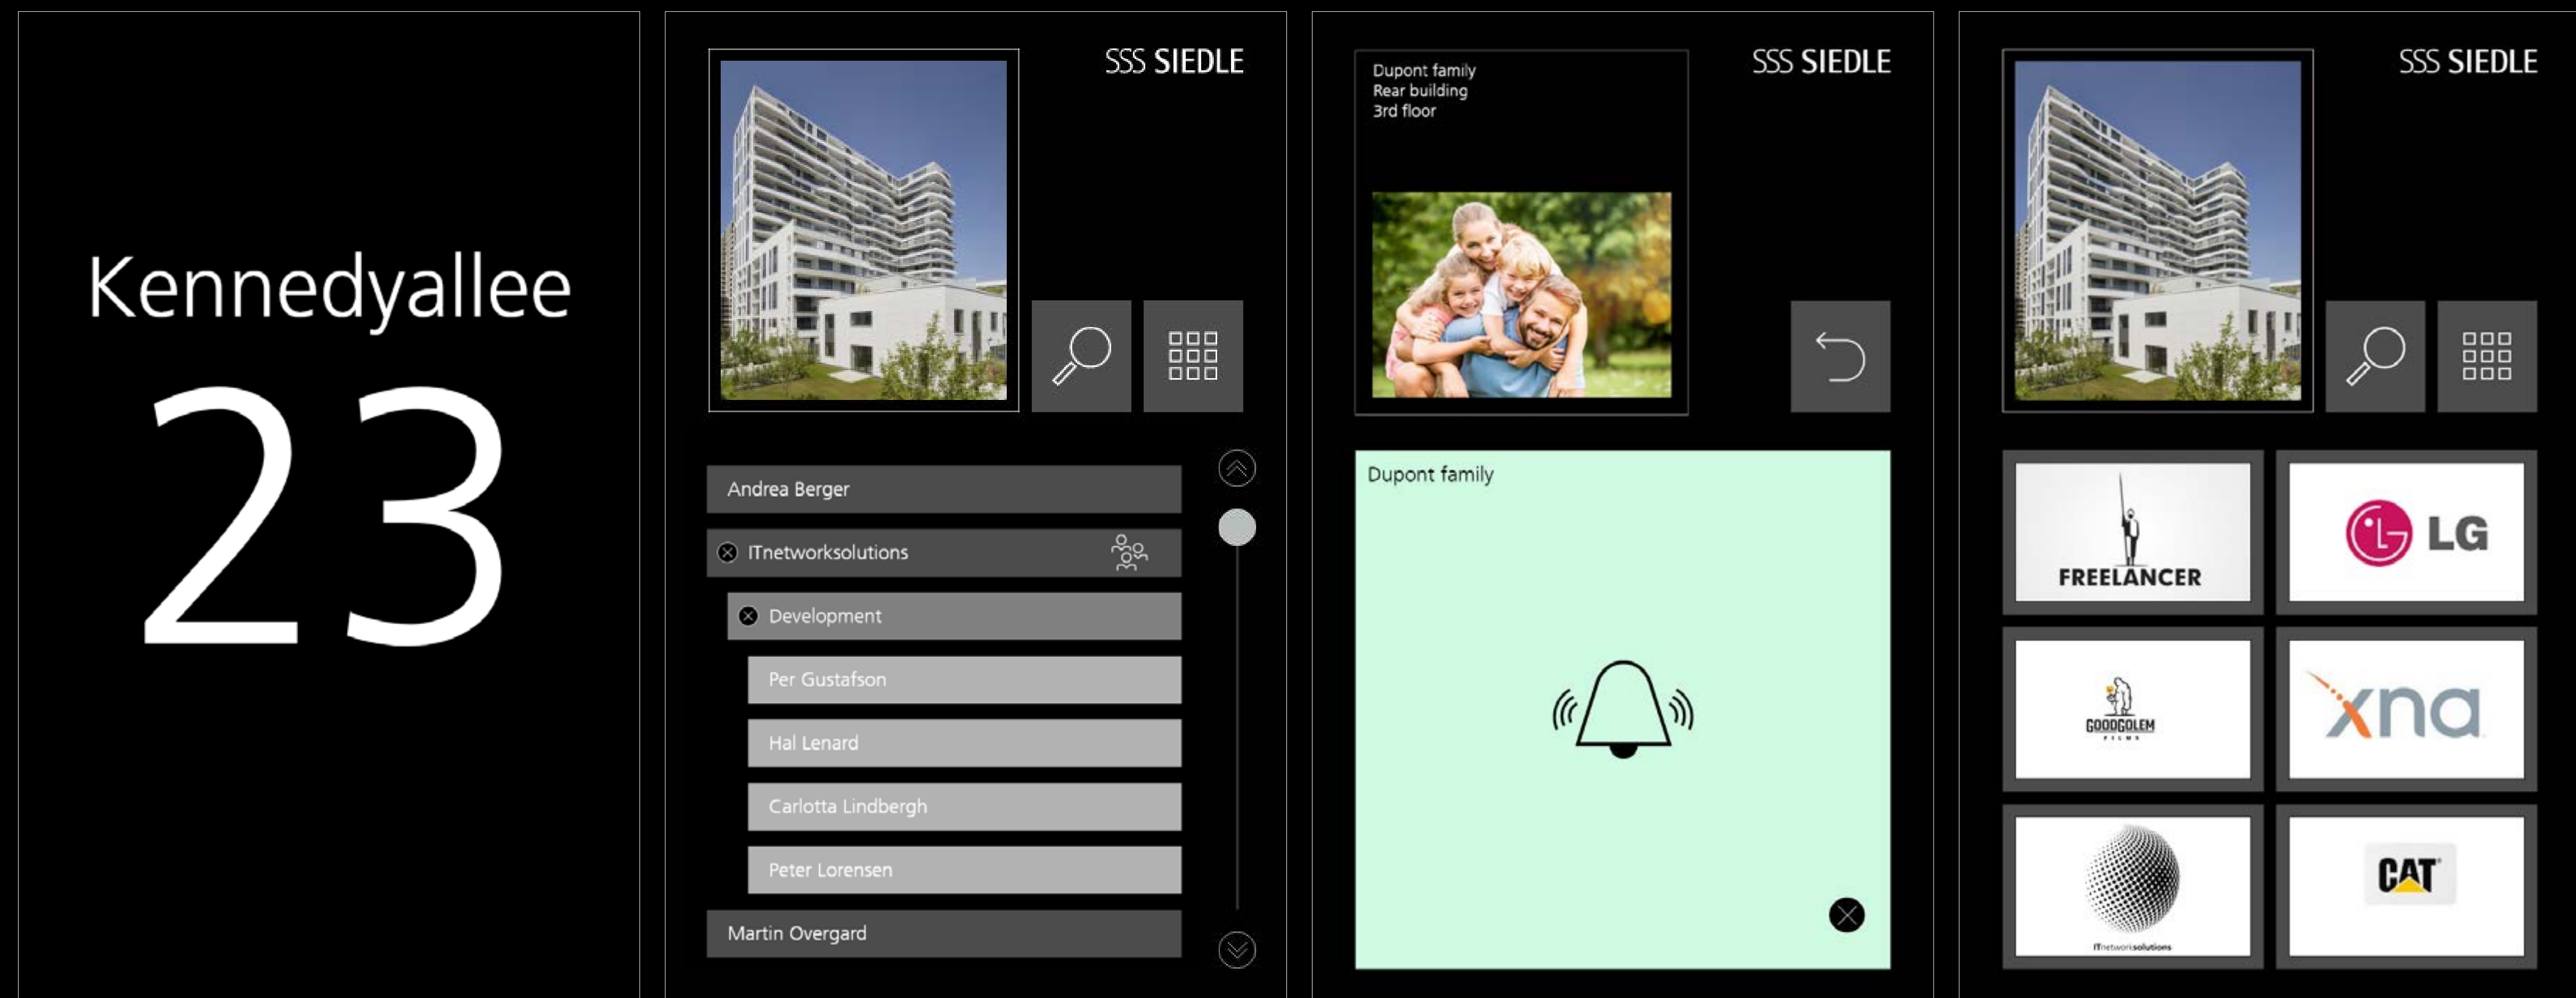

Useful facts

– Is any further customization of the user interface possible?

    The possibilities have to be discussed with Siedle Engineering in each individual case.

– How are the entries for names and individual images/texts managed?

    The customer-specific data are managed via an easy-to-operate configuration interface. Siedle Touch must be accessible via the IP network for updating the data.
