At a glance

- Siedle IQ Touch – smart touch display for large residential complexes
- Online administration via cloud-based platform
- Digital name management via platform or app
- User-friendly user interface with intelligent search function
- Connection of the Siedle app for mobile door communication and keyless access
- Integrated access control with code lock and MIFARE DESFire reader
- Status display for barrier-free door communication

For large residential complexes

Think bigger: Siedle IQ Touch

Siedle is expanding the IQ product family with a video door station with touch display. IQ Touch brings the advantages of the IP system to larger projects. The touch display goes hand in hand with the expansion of the Internet platform. In future, Siedle will provide additional services for the housing industry on this platform.

The new services will save property managers a lot of travelling and expensive personnel deployment. Resident names, for example, can be changed digitally via the IQ platform or app. Asset and project management, maintenance and access control can also be carried out remotely. "The most important development goal of IQ is that it makes life easier for all users, facilitates work and simplifies processes. This is particularly true for professional use in the housing industry. The operation of large residential complexes requires low-maintenance technology with a good price-performance ratio that can be relied on for years to come," says Peter Strobel, Managing Director Market and Innovation at Siedle.

The IQ platform is the centrepiece of the system: It maps the projects, connects all users and enables remote administration. Siedle is continuously expanding the system with new functions and digital services. Security updates are installed automatically. And the data is secure: All Siedle servers are located in Europe.

Smart search, intelligent functions

With the image memory, residents can view snapshots of missed visitors later. For data protection reasons, the function is initially switched off; an electrician must activate it via the IQ Config app. The resident can then use it in their Siedle app.

Low-barrier door communication

The user interface of the door station follows the IQ motto of maximum simplicity. The smart search function makes tedious scrolling superfluous – it processes entries immediately and suggests relevant entries.

Access is controlled by an integrated MIFARE DESFire reader and a code lock. The door can be opened keylessly via the Siedle app. The status display enables barrier-free operation at the door. The camera delivers razor-sharp images with a wide angle of coverage and night vision function. The user interface is activated by a proximity sensor; a cleaning mode makes maintenance easier.

Simple installation and commissioning

The door station can be operated via LAN/PoE or WLAN with an external power supply. The surface-mounted device is easy to install, even on insulated walls. Commissioning is just as easy: It can be prepared during operation or carried out on site, either via the IQ Config app or via the IQ platform. Both methods guide you through the process step by step and are therefore also suitable for less experienced employees.

The market launch of IQ Touch is scheduled for October 2026.

S. Siedle & Söhne – heading into the future with 275 years of tradition behind it

Siedle, founded in 1750, is a manufacturer of building communication technology and one of the oldest family-run companies in Germany. The company stands for innovative strength, high quality standards, award-winning design, durable products – and Made in Germany: more than 80 percent of the value added still takes place at the original company location today. The portfolio includes video intercom systems, mobile door opening, user-friendly apps and a product family for access control. Siedle products are used in all types of buildings: from intercom systems in single-family homes to integrated IP communication with thousands of access points in residential or industrial complexes.

The traditional device manufacturer is positioning itself for the future in a market environment increasingly characterised by globalisation and digitalisation. What remains constant are the values, culture and mission statement that define the design brand.

Siedle IQ – the new IP system

Siedle IQ is a product family consisting of an IoT platform, apps, digital services and IP video intercom systems. All functions are easy to understand and intuitive to use.

The heart of the system is the IQ platform. This is where electricians, residents, administrators and devices are networked with each other. It digitally maps the entire project process: from planning to remote maintenance during operation. Another advantage is that it provides qualified customer contacts. Builders plan their system online, select a suitable specialist company and can commission it directly. The platform is continuously being developed and expanded with new functions. Security updates are carried out automatically and EU data protection requirements are taken into account.

Siedle IQ systems can be preconfigured in the office using the Config app developed specifically for the system and put into operation with just a few clicks. Siedle IQ supports both LAN/PoE and WLAN with an external power supply. This saves effort and makes the system particularly flexible. The system is compatible with the proven Siedle app, which enables mobile door communication and access control functions via smartphone.
