General information

Application

Entrance controller in switch panel housing for code lock module, electronic key reading module or fingerprint module. Display-supported programming via integrated buttons, or by means of PC software via additional programming interface PRI 602-... Electronic evaluating circuit with 2 switching outputs, extendable to 8 with ECE 602-..., 2 control inputs for time-controlled access rights. *
Key cards can only be programmed if ELM... are connected.

* FPM 611-02 programming only possible at the PC, accessories required.

Password

You can protect the EC 602-... against unauthorised access by using a password. A password is not set in the factory.

Device overview

The following devices can be operated on the EC 602-...:

Accessories	Type	Quantity
ECE 602-...	Extension for the EC 602-...	max. 1
Input/read units	Type	Quantity
COM 611-...	Code lock	max. 8
ELM 600-... / ELM 611-...	Electronic key reader (non-contact card reader)	max. 8
FPM 611-...	Fingerprint reader	max. 8
DRM 612-...	Display call module	max. 8

Remarks

- As the DRM 612-... display call module was designed for digital calls, an externally connected button for the key button function is required in order to use it on the EC/ECE 602-...

Address setting

For all input/read units connected to the EC/ECE 602-..., a Vario bus address between 1 and 8 must be set. This setting is made using a rotary switch which is located under the rear cover next to the ribbon cable connection. The Vario bus address "1" is factory set on all input/read units.

Different input/read units which are combined on a door station (e.g. COM... and ELM...) each receive the same address. If the same input/read units are used, a different Vario bus address must always be set.

The Vario bus address setting "0" and "9" and duplicate assignment of Vario bus addresses for the same device types (e.g. 2 x COM 611-...) leads to malfunctions within the Vario bus and must not be carried out.

Operation

Button functions

The display and the buttons are located under the housing cover. The housing cover can be opened by pulling the upper edge.

Ready for operation

The EC 602-... is ready for operation when the start screen is displayed (approx. 7 seconds after switching the power on):

System behaviour

If no entries are made in a programming menu for more than 10 minutes, then the EC 602-... automatically switches back to the start screen. Any entries that were not saved will be lost.

Display behaviour

The menu and submenu level is endless and repeats if the up or down arrow key is pressed repeatedly. During programming, submenu titles are not displayed when moving between two submenus.

Button functions

		Up and down arrow key *	<ul style="list-style-type: none">• Navigation in the menu structure• Select input (e.g. 5)
		Left and right arrow key *	<ul style="list-style-type: none">• Select position in input field
		OK button	<ul style="list-style-type: none">• Switch to a menu/submenu• Start programming• Save input• Confirm process
		ESC button	<ul style="list-style-type: none">• Return to higher-level menu• Cancel process

* If pressed and held, all arrow keys repeat their functions until released (repeat function). The possible button functions for an operating step are shown on the display, apart from the left and right arrow key.

Display screens

Example	Function	Explanations
<div style="border: 1px solid black; padding: 5px; text-align: center;"> SSS Siedle EC 602-03 V2.xx </div>	Start screen	Start screen which shows that the EC 602-... is ready to operate. Press the OK button to switch to the menu structure.
<div style="border: 1px solid black; padding: 5px; text-align: center;"> SYSTEM ↑↓ = Next OK = Prog </div>	Navigation in the menu structure	You can use the up and down arrow key to navigate in the menu structure, e.g. to the CODE menu.
<div style="border: 1px solid black; padding: 5px; text-align: center;"> CODE ↑↓ = Next OK = Prog </div>	Switch to the submenu	Press the OK button to switch to the relevant submenu, e.g. to access the Code programming submenu from the CODE menu.
<div style="border: 1px solid black; padding: 5px; text-align: center;"> Code programming ↑↓ = Next OK = Prog </div>	Execute function	Press the OK button to start the configuration process in the Code programming submenu.
<div style="border: 1px solid black; padding: 5px; text-align: center;"> ↑↓ = New OK = Store Code 01 _ </div>	Select characters/digits in the input field	Each position in an input field is indicated by a <code>_</code> . Numbers (e.g. 0–9), letters (e.g. A, B, C, D, L, G) or a pre-selection (e.g. NO, YES, internal, external) can be entered, depending on the configuration in the relevant menu. You can use the up and down arrow key to select, for example, the input value of individual input field positions in the Code programming menu (e.g. the first digit of code 01 is 5). You can use the left and right arrow key (not shown on the display) to move to different positions in the input field.
<div style="border: 1px solid black; padding: 5px; text-align: center;"> ↑↓ = New OK = Store Code 01 5 </div>		
<div style="border: 1px solid black; padding: 5px; text-align: center;"> ↑↓ = New OK = Store Code 01 502Z </div>		
<div style="border: 1px solid black; padding: 5px; text-align: center;"> ↑↓ = New OK = Store Code 01 502Z </div>	Save the configuration and go to the next configuration point.	Use the OK button to save the input and go to the next submenu point, e.g. Relay selecting.
<div style="border: 1px solid black; padding: 5px; text-align: center;"> Show Code ESC = Back OK = Prog </div>	ESC button: Cancel the current function or switch to the higher-level menu.	You can use the ESC button to abandon the current configuration or cancel the current process. Press the button again to go back to the higher-level menu.

Switching inputs and outputs

Switching inputs

There are 2 switching inputs E1 and E2 on the EC 602-... for enabling/disabling switching functions via potential-free contacts (e.g. via a timer):

- Switching input E1 (disables all access options globally):

If the contact is opened, then all access options (code, key card, fingerprint, key button) for which the disable function was configured are disabled.

- Switching input E2 (key button enable): Connected key buttons only work when the contact is closed (COM 611-... or externally via button).

Priority control

If both control inputs are wired, E1 has priority.

External voltage must not be applied to the control inputs E1 and E2.

Switching outputs

On the EC 602-..., there are 2 potential-free switching outputs (relay changeover contact) relay 1 and relay 2. The EC 602-... can be extended with 6 relay changeover contacts through a ECE 602-...

Relay function

In the EC 602-... and ECE 602-..., each relay is assigned a unique relay number and Vario bus address:

Model	Relay number	Vario bus address
EC 602-...	1	1
	2	2
ECE 602-...	3	3
	4	4
	5	5
	6	6
	7	7
	8	8

In the SYSTEM menu, the relay function L (local) and G (global) can be configured for each relay.

To use a local relay function, the Vario bus address of the assigned relay must be set on the input/read device. Otherwise, only the global relay function can be used.

- LOCAL: If a relay is operated locally (e.g. relay 2), then it can only be triggered with the assigned code, key card, fingerprint or key button of the input/read units with the Vario bus address 2 (e.g. an access door can only be opened by one input/read device). If the same input is made by another input/read device, this relay will not be triggered.

Example

Relay 2 is configured locally and assigned to code 01. 2 COM 611-... are operated (Vario bus address 1 and 2).

System behaviour: Relay 2 only switches if code 01 is entered via the COM with Vario bus address "2".

- GLOBAL: If a relay is operated globally, then it can be triggered with the assigned code, key card, fingerprint or key button of each input/read unit, regardless of its Vario bus address (e.g. it needs to be possible to open an access door from both sides using one input device each with the same code).

Example

Relay 1 is configured globally and relay 2 is configured locally. Relay 1 is assigned to code 01, relay 2 is assigned to code 02 and relay 1 and 2 is assigned to code 03. 2 COM 611-... are operated (Vario bus address 1 and 2).

System behaviour: If code 01 or 03 is entered via one of the two COM..., then relay 1 is triggered. Relay 2 is only triggered when code 02 or 03 is entered via the COM... with Vario bus address "2".

Operation without extension

If the EC 602-... is operated without an ECE 602-..., then, in the case of a local relay configuration, a maximum of two identical input/read units (COM/ELM/FPM/DRM) can be operated. If at least one of the relays is configured globally, then up to eight identical input/read units (COM/ELM/FPM/DRM) can be operated.

Time

Relays can be configured with a switching time of 0–59 minutes and 59 seconds and gateways with a pause time of 0–59 minutes and 59 seconds between two relay switch-on phases.

On/off function (toggle):

An on/off function can be configured using the EC/ECE 602-... To do so, the relay must be programmed globally in the Relay Function menu and in the Time menu the release time must be configured to 0 minutes and 0 seconds. If the relay is triggered via assigned code, card, fingerprint or key button via the input/read units, then the relay switches its switching state and remains in this state until the next input.

Gateway function

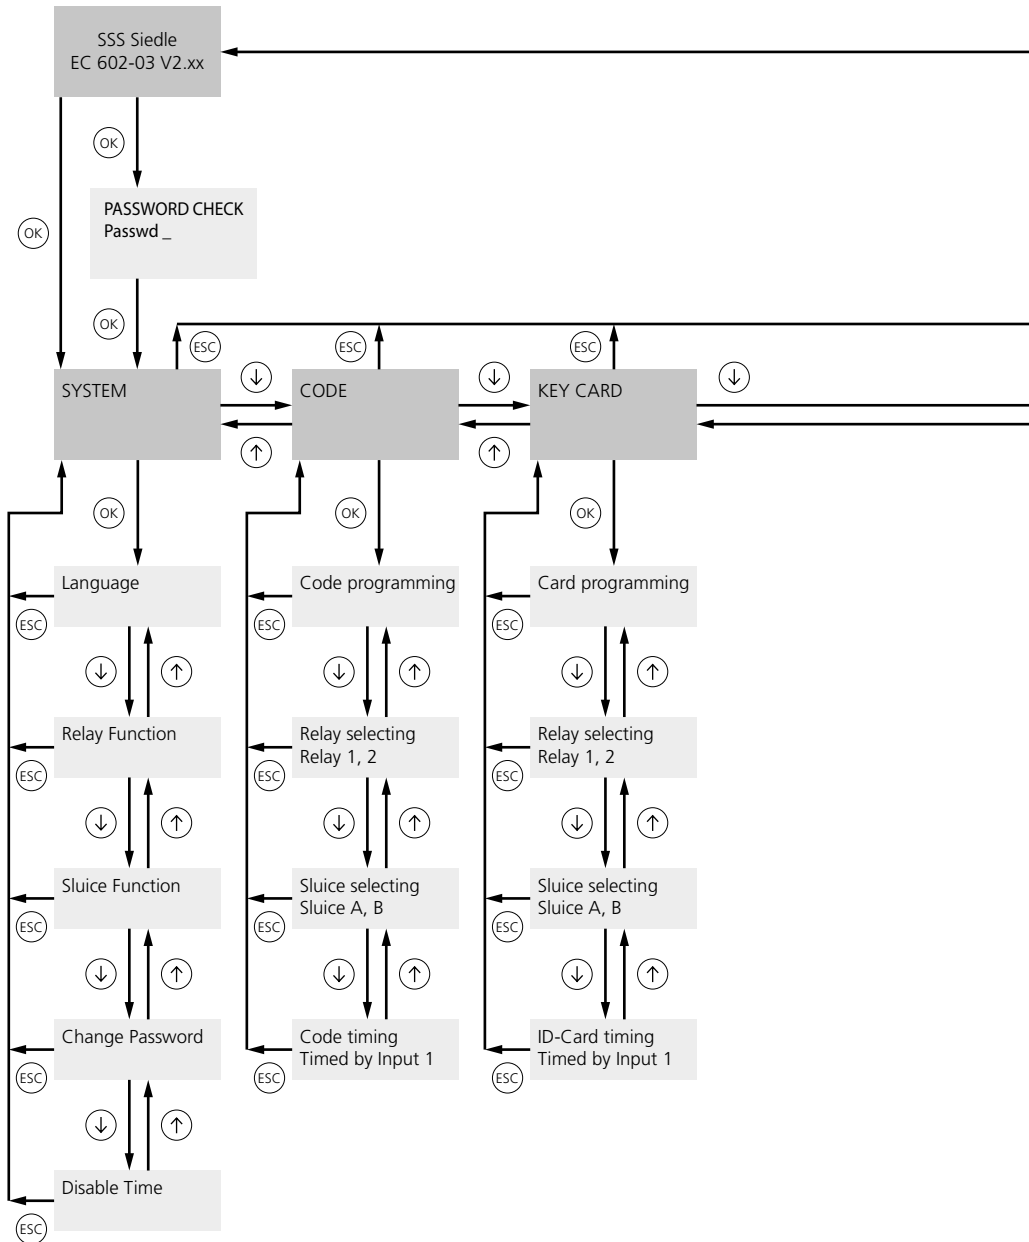

The gateway function enables a time-controlled switching sequence for two relays in any order. A gateway function must be programmed for each throughput direction through a gateway. In the case of gateways for which there is an incoming throughput direction as well as an outgoing throughput direction, two gateway functions must be programmed (e.g. incoming: gateway A with switching sequence: relay 1, 2 and outgoing: gateway B with switching sequence: relay 2, 1).

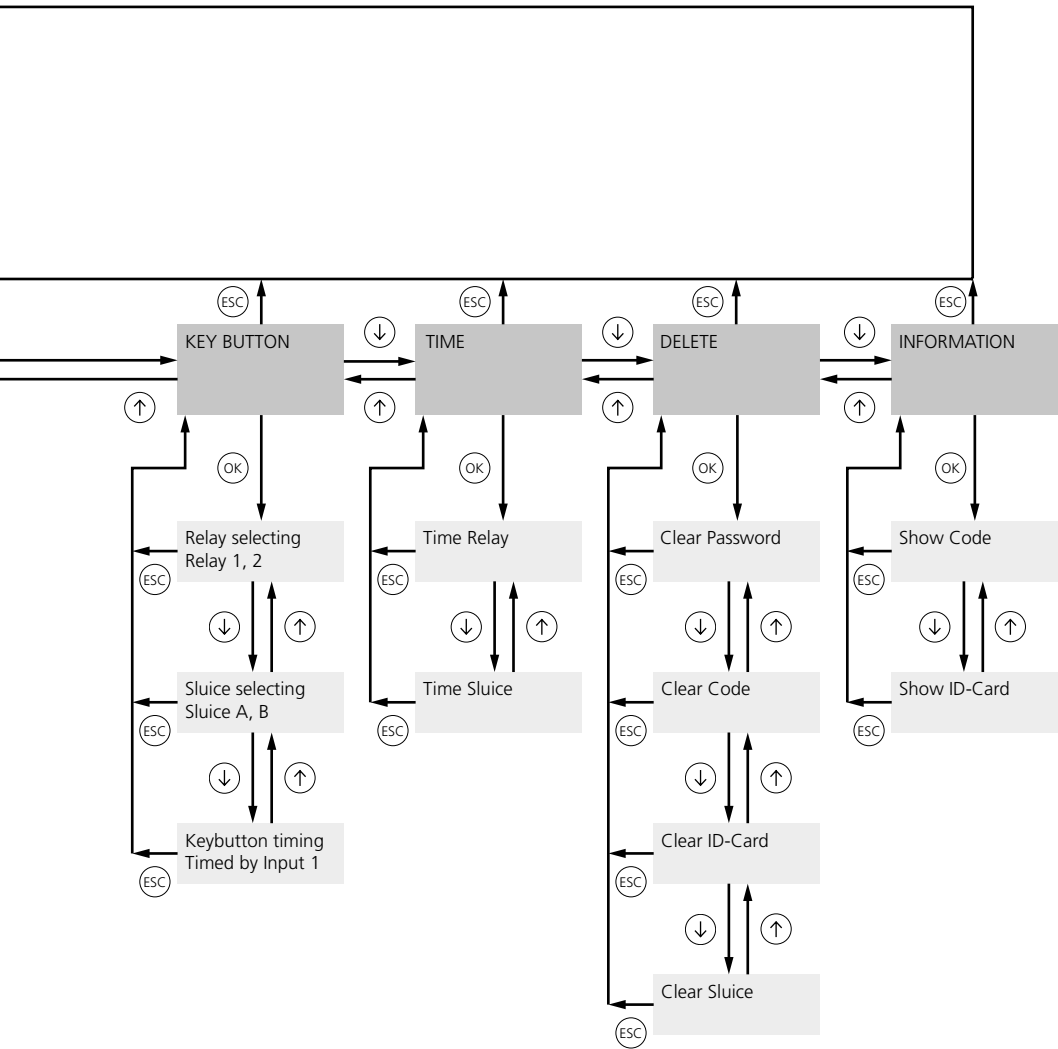

2 relays are needed for each gateway function. The relay assigned to the 1st position (Out1) in the switching sequence (e.g relay 1) always switches first. After a specific pause time, the relay assigned to the 2nd position (Out2) switches (e.g. relay 2).

The relay configuration (local/global) affects the input/read units authorised to trigger the gateway:

Relay [x] 1st position	Relay [y] 2nd position	Gateway triggering
Local	Local or global	Through all input/read units with the same Vario bus address as the 1st position relay
Global	Local	Through all input/read units with the same Vario bus address as the 2nd position relay
Global	Global	Through all input/read units via which the correctly assigned code, key card or fingerprint is entered

Configuration details

Key cards

Instead of using codes or fingerprints, key cards (electronic key cards or electronic keys) can also be used for access.

Always read in key cards (EKC/EK...) for programming via the ELM... read unit with the lowest Vario bus address. In programming mode, both LED indicators light up on this read unit.

ELM... LED display

Programming

Red and green LEDs light up together.	Programming mode active while a key card is read in.
Green LED flashes for 1 second while the red LED is lit.	Key card has been read in successfully.
Red LED flashes while the green LED is lit.	The maximum number of readable key cards has been reached.

Operation

The red and green LEDs flash alternately for 10 seconds.	ELM... switch-on phase
Steady green LED light.	The read unit is in operating mode.
The green LED flashes for 3 seconds.	The programmed function has been carried out.
The red LED flashes for 3 seconds	Unauthorised key card is being used.

Key buttons

There is a key button (internal) on the keypad on the COM 611-... input unit. Separate buttons can be connected to the COM 611-... and DRM 611-.../612-... input/read units which can be used as key buttons (external).

Relays and/or gateways can be optionally assigned to key cards.

Codes

Up to 99 codes (each max. 8-digit) can be programmed.

It is not possible to assign codes twice.

Relays and/or gateways can be optionally assigned to codes.

Disable time

To prevent unauthorised access to the access areas, an input lock can be programmed for 1–59 minutes in the EC 602-... for all input/read devices.

The input lock is activated after the 10th unsuccessful access attempt with an incorrect code, unauthorised key card or unauthorised fingerprint.

In this case, it is assumed that an unauthorised access attempt is being made. All further input attempts are ignored for the programmed disable time.

Access code programming example

Entering a code

This programming example covers the following related programming sequences:

- Entering a code
- Selecting a relay
- Selecting a gateway
- Time control

Programming example

Program a code (code 01) with the digits 2345, assign a relay switching function (relay 2) or a gateway function (gateway B) to this code and activate the time control for this code.

Procedure	Function button	Display indicator
Entering a code	–	CODE ↑↓ = Next OK = Prog
Press the OK button.		Code programming ↑↓ = Next OK = Prog
Press the OK button.		↑↓ = New OK = Store Code 01_
Press the up arrow key repeatedly until "2" appears.		↑↓ = New OK = Store Code 01_ 2
Press the right arrow key to move to the next position.		↑↓ = New OK = Store Code 01_ 2_
Repeat the last two steps to enter the entire code.		↑↓ = New OK = Store Code 01_ 2345
Press the OK button. The entry is saved.		

Access code programming example

Press the up arrow key.		Timed by Input 1 Code 01 <u>Y</u> ES
Press the OK button. The entry is saved.		↑↓ = New OK = Store Code 01 _
Press the ESC button.		CODE ↑↓ = Next OK = Prog
Press the ESC button.		SSS Siedle EC 602-03 V2.xx

Programming

System settings

In the SYSTEM menu, configure the relay and gateway functions, the system language and a system password.

1. Language

Configure the operating language of the EC 602-... in the Language submenu.

Procedure

- 1 Call up the SYSTEM menu.
- 2 Call up the Language submenu.
- 3 Select the required language (German/English).
- 4 Press OK to confirm.
- 5 Press the ESC button twice.

2. Relay function

Configure the local and/or global function of the EC/ECE 602-... relays in the Relay Function submenu.

Procedure

- 1 Call up the SYSTEM menu.
- 2 Call up the Relay Function submenu.
- 3 Configure the output of all local (L) or global (G) relays.
- 4 Press OK to confirm.
- 5 Press the ESC button twice.

3. Gateway function

In the Gateway Function submenu [Sluice function], program the gateway function (relay switching sequence) of the EC/ECE 602-...

Procedure

- 1 Call up the SYSTEM menu.
- 2 Call up the Gateway Function submenu.
- 3 Select the first gateway (e.g. A).
- 4 Select the first relay in the switching sequence at "Out1" (e.g. for relay 1).
- 5 Select the second relay in the switching sequence at "Out2" (e.g. for relay 2).
- 6 Press OK to confirm.
- 7 Program the second gateway (e.g. B) as before or press the ESC button twice to exit.
- 8 Press the ESC button twice.

4. Changing the password

In the Change Password submenu, define a sequence of numbers up to eight digits long to protect the EC 602-... against unauthorised access.

Procedure

- 1 Call up the SYSTEM menu.
- 2 Call up the Change Password submenu.
- 3 Use the arrow keys to enter the sequence of numbers.
- 4 Press OK to confirm.
- 5 Press the ESC button twice.

5. Disable time

In the Disable Time submenu, configure the amount of time for which the system will ignore all inputs after ten failed attempts to gain access.

Procedure

- 1 Call up the SYSTEM menu.
- 2 Call up the Disable Time submenu.
- 3 Select the required disable time (0–59 minutes).
- 4 Press OK to confirm.
- 5 Press the ESC button twice.

Input codes

In the CODE menu, program the input code for using the COM 611-... in the access control system.

1. Entering a code

In the Code submenu, program the input codes for the COM 611-... input unit in the EC 602-...

Procedure

- 1 Call up the CODE menu.
- 2 Call up the Code programming submenu.
- 3 Select the required code number (e.g. code 01).
- 4 Enter the required numerical code (1–8-digit).
- 5 Press OK to confirm.
- 6 Press the ESC button twice.

2. Selecting a relay

In the Relay selecting submenu assign the associated relays to the code numbers in the EC 602-...

Procedure

- 1 Call up the CODE menu.
- 2 Call up the Relay selecting submenu.
- 3 Select the required code number (e.g. code 01).
- 4 Assign the required relay(s).
- 5 Press OK to confirm.
- 6 Press the ESC button twice.

3. Selecting a gateway

In the Gateway selecting submenu [Sluice selecting] assign the associated gateways to the code numbers in the EC 602-...

This menu item only appears if the gateway function has been set up in the SYSTEM menu.

Procedure

- 1 Call up the CODE menu.
- 2 Call up the Gateway selecting submenu.
- 3 Select the required code number (e.g. code 01).
- 4 Assign the required gateway(s).
- 5 Press OK to confirm.
- 6 Press the ESC button twice.

4. Time control

In the Code timing submenu, determine whether the relevant access option can also be deactivated via the wiring for control input E1.

Procedure

- 1 Call up the CODE menu.
- 2 Call up the Code timing submenu.
- 3 Select the required code number (e.g. code 01).
- 4 Select YES if you want it to be possible to deactivate the required Code number, otherwise select NO.
- 5 Press OK to confirm.
- 6 Press the ESC button twice.

Programming

Key cards

In the KEY CARD menu, read in the key cards and program them for use of the ELM... in the access control system.

1. Card input

In the Card programming submenu, in the EC 602-... read in the key cards via the ELM... input unit and program them.

Procedure

- 1 Please number the key cards to be read in, starting with the number "001", to prevent mix-ups during programming, management or transfer to the user.
- 2 Call up the KEY CARD menu.
- 3 Call up the Card programming submenu.
- 4 Select the required key card number (e.g. card 001).
- 5 Hold the key card in front of the ELM... read device with the lowest Vario bus address in order to read the key card. Both LEDs will light up on the read device.
If the key card has been successfully read, the green LED on the ELM... will flash for 1 second as confirmation.
- 6 Confirm and save the read-in key card by pressing OK.
- 7 Press the ESC button twice.

Note

If you need to read-in more key cards at a later point, the first free key card number is displayed in the called-up Card programming menu. There can also be a gap in this, if, for example, a key card number had to be deleted. The read-in process is as described under point 5 and 6.

2. Selecting a relay

In the Relay selecting submenu assign the associated relays to the key cards in the EC 602-...

Procedure

- 1 Call up the KEY CARD menu.
- 2 Call up the Relay selecting submenu.
- 3 Select the required key card number (e.g. card 001).
- 4 Assign the required relay(s).
- 5 Press OK to confirm.
- 6 Press the ESC button twice.

3. Selecting a gateway

In the Gateway selecting submenu [Sluice selecting] assign the associated gateways to the key cards in the EC 602-...

This menu item only appears if the gateway function has been set up in the SYSTEM menu.

Procedure

- 1 Call up the KEY CARD menu.
- 2 Call up the Gateway selecting submenu.
- 3 Select the required key card number (e.g. card 001).
- 4 Assign the required gateway(s).
- 5 Press OK to confirm.
- 6 Press the ESC button twice.

4. Time control

In the Code timing submenu, determine whether the relevant access option can also be deactivated via the wiring for control input E1.

Procedure

- 1 Call up the KEY CARD menu.
- 2 Call up the Code timing submenu.
- 3 Select the required key card number (e.g. card 001).
- 4 Select YES if you want it to be possible to deactivate the required key card number (e.g. internal), otherwise select NO.
- 5 Press OK to confirm.
- 6 Press the ESC button twice.

Key buttons

In the KEY BUTTON menu, define whether internal/external key buttons from COM/DRM 611-... can be used to trigger the relay or gateway functions in the access control system.

1. Selecting a relay

In the Relay selecting submenu assign the associated relays to the key buttons in the EC 602-...

Procedure

- 1 Call up the KEY BUTTON menu.
- 2 Call up the Relay selecting submenu.
- 3 Select the available key button type (internal/external).
- 4 Assign the required relay(s).
- 5 Press OK to confirm.
- 6 Press the ESC button twice.

2. Selecting a gateway

In the Gateway selecting submenu [Sluice selecting] assign the associated gateways to the key buttons in the EC 602-...

This menu item only appears if the gateway function has been set up in the SYSTEM menu.

Procedure

- 1 Call up the KEY BUTTON menu.
- 2 Call up the Gateway selecting submenu.
- 3 Select the available key button type (internal/external).
- 4 Assign the required gateway(s).
- 5 Press OK to confirm.
- 6 Press the ESC button twice.

3. Time control

In the Code timing submenu, determine whether the relevant access option can also be deactivated via the wiring for control input E1.

Procedure

- 1 Call up the KEY BUTTON menu.
- 2 Call up the Keybutton timing submenu.
- 3 Select the available key button type (internal/external).
- 4 Select YES if you want it to be possible to deactivate the required key button type (e.g. internal), otherwise select NO.
- 5 Press OK to confirm.
- 6 Press the ESC button twice.

Programming

Switching and pause times

In the Time menu, configure the relay switching times and the gateway pause times.

1. Relay

In the Time Relay submenu, configure the switching times for the relays in the EC 602-...

The switching time of a relay is the time (after a relay has been triggered) that a relay remains in its new switching state before it switches back to its original state.

Procedure

- 1 Call up the TIME menu.
- 2 Call up the Time Relay submenu.
- 3 Select the required relay number (e.g. relay 1).
- 4 Configure the required release time.
- 5 Press OK to confirm.
- 6 Configure other relays or press the ESC button twice.
- 7 Press the ESC button twice.

2. Gateway

In the Gateway submenu [Time Sluice], configure the pause times for the gateways in the EC 602-...

The pause time of a gateway is the time period between two switch-on phases of the first and second relay, with the gateway function (e.g. relay 2 is not triggered for 30 seconds after relay 1 has been triggered).

Procedure

- 1 Call up the TIME menu.
- 2 Call up the Time sluice submenu.
- 3 Select the required gateway (e.g. Sluice A).
- 4 Configure the required pause time.
- 5 Press OK to confirm.
- 6 Configure other gateways or press the ESC button twice.
- 7 Press the ESC button twice.

Deleting data

In the DELETE menu, delete the set password, programmed codes, read-in key cards and configured gateway functions from the EC 602-...

If there is no data available for deletion, a "No Data" message will appear.

If several codes are available, for example, then the next code will appear after each deletion process, otherwise the next submenu will appear (e.g. Clear ID-Card).

Procedure

- 1 Call up the DELETE menu.
- 2 Select Clear password, Clear code, Clear ID-Card or Clear gateway.

Remarks

The deletion process enables all deletable data (password, code, card, gateway) to be deleted by repeatedly pressing the OK button until the "No Data" message appears. If necessary, use the Reset function for extensive deletion.

- 3 Select the data you want to delete.
- 4 Press the OK button twice to confirm deletion or the ESC button to cancel the process.
- 5 Press the ESC button twice.

Displaying the configuration

In the INFORMATION menu you can view the configuration of programmed codes and key cards that have been read in.

Procedure

- 1 Call up the INFORMATION menu.
- 2 Call up the Show code or Show ID-Card submenu.
- 3 Select the required code number (e.g. code 05) or key card number (e.g. card 003) and press the OK button to confirm.
- 4 Only relevant for Show code: Enter the programmed code (e.g. 75296) and press the OK button to confirm.
- 5 Press the up/down arrow key to view the individual configurations of the selected code or key card.
- 6 Press the ESC button twice.

Reset (Reset)

A reset deletes all inputs including the password and restores the as-delivered status.

Please note that you must confirm both the prompt and the confirmation prompt within five seconds by pressing OK, otherwise the process will be aborted.

Procedure

- 1 Switch off the supply voltage.
- 2 Press and hold the up arrow key.
- 3 Switch the supply voltage on.
- 4 Once the "Clear data" prompt appears after approximately seven seconds, release the up arrow key.
- 5 Press the OK button within five seconds to carry out the reset or press the ESC button to cancel the process.
- 6 Press the OK button within five seconds to confirm the "Really delete?" confirmation prompt and carry out the reset or press the ESC button to cancel the process.
- 7 Once the reset process has started, "Please wait" will appear on the display.
- 8 If the reset was successful, the start screen will be displayed.
